

4.5

Suppose that zero interest rates with continuous compounding are as follows:

Maturity (months)	Rate (% per annum)
3	8.0
6	8.2
9	8.4
12	8.5
15	8.6
18	8.7

Calculate forward interest rates for the second, third, fourth, fifth, and sixth quarters.

4.8

What does duration tell you about the sensitivity of a bond portfolio to interest rates? What are the limitations of the duration measure?

4.9

What rate of interest with continuous compounding is equivalent to 15% per annum with monthly compounding?

4.11

Suppose that 6-month, 12-month, 18-month, 24-month, and 30-month zero rates are 4%, 4.2%, 4.4%, 4.6%, and 4.8% per annum with continuous compounding respectively. Estimate the cash price of a bond with a face value of 100 that will mature in 30 months and pays a coupon of 4% per annum semiannually.

4.12

A three-year bond provides a coupon of 8% semiannually and has a cash price of 104. What is the bond's yield?

4.14

Suppose that zero interest rates with continuous compounding are as follows:

Maturity (years)	Rate (% per annum)
1	2.0
2	3.0
3	3.7
4	4.2
5	4.5

Calculate forward interest rates for the second, third, fourth, and fifth years.

4.16

A 10-year, 8% coupon bond currently sells for \$90. A 10-year, 4% coupon bond currently sells for \$80. What is the 10-year zero rate? (Hint: Consider taking a long position in two of the 4% coupon bonds and a short position in one of the 8% coupon bonds.)

4.22

A five-year bond with a yield of 11% (continuously compounded) pays an 8% coupon at the end of each year.

a)

What is the bond's price?

b)

What is the bond's duration?

c)

Use the duration to calculate the effect on the bond's price of a 0.2% decrease in its yield.

d)

Recalculate the bond's price on the basis of a 10.8% per annum yield and verify that the result is in agreement with your answer to (c).

4.34

The following table gives the prices of bonds

Bond Principal (\$)	Time to Maturity (yrs)	Annual Coupon (\$)*	Bond Price (\$)
100	0.5	0.0	98
100	1.0	0.0	95
100	1.5	6.2	101
100	2.0	8.0	104

*Half the stated coupon is paid every six months.

a)

Calculate zero rates for maturities of 6 months, 12 months, 18 months, and 24 months.

b)

What are the forward rates for the periods: 6 months to 12 months, 12 months to 18 months, 18 months to 24 months?

c)

What are the 6-month, 12-month, 18-month, and 24-month par yields for bonds that provide semiannual coupon payments?

d)

Estimate the price and yield of a two-year bond providing a semiannual coupon of 7% per annum.
